

EDUGENIE — PROBLEM STATEMENT

=====

PRIMARY PROBLEM

Students of all academic levels — from school to college — often cannot access quick, affordable, and reliable learning help. Professional tutoring costs Rs. 500–2,000 per hour, textbooks are static and expensive, and search engines return results that are either too complex or inaccurate. There is no free, personalized, AI-driven study companion available to every student.

SECONDARY PROBLEMS

- No quick way to get clear explanations of difficult concepts
- No instant tool that generates practice quizzes from any topic
- Students waste time searching for reliable learning resources
- Learning paths are unstructured and confusing for self-learners
- Existing AI tools require paid subscriptions and API keys

TARGET USERS

- School and college students preparing for exams
- Self-learners exploring new subjects (e.g., SQL, Python)
- Teachers looking for quick quiz generation
- Anyone needing fast explanations or summaries

SUCCESS CRITERIA

- Student receives an answer or explanation in under 15 seconds

- All 5 features (Q&A, Explain, Summarize, Quiz, Learn) work reliably
- No cost to the end user
- Runs locally on any Windows machine
- Simple, distraction-free interface
