

## EDUGENIE — SOLUTION ARCHITECTURE

=====

### COMPONENT DIAGRAM

Fetch API (AJAX)

Python function calls

|                                   |        |
|-----------------------------------|--------|
| <b>AI CORE</b>                    |        |
| <code>_gen(prompt)</code>         | helper |
|                                   |        |
| <code>answer_question(q)</code>   |        |
| <code>explain_topic(topic)</code> |        |
| <code>summarize_text(text)</code> |        |
| <code>generate_quiz(text)</code>  |        |
| <code>learning_path(topic)</code> |        |

↓  
HTTPS

|                               |  |
|-------------------------------|--|
| <b>GOOGLE GEMINI API</b>      |  |
| <code>gemini-3.8-flash</code> |  |

## SECURITY

- `GOOGLE_API_KEY` stored in `.env` only
- `.env` excluded via `.gitignore`
- No user data stored on any server
- No authentication needed (stateless privacy-first design)

## MODULARITY

- Each feature is a separate function
- Shared `_gen()` helper avoids code duplication

- **Templates folder isolated from logic**
- **Static CSS separated from HTML**
